The OCULUS Easyfield® C is an exciting compact perimeter to do static perimetry up to 30°. It has been designed for the combined use as visual field screener and perimeter, offering features usually available only in large units. The closed bowl with a 11.81” (30cm) radius and distance adapted lens conforms to the Goldmann standard and fulfills the ISO-12866 norm for perimeters.

The new OCULUS Easyfield® is also available as Easyfield® S. All features and advantages are exactly the same, only the device’s body comes without chinrest and stand support – which is even more space-saving.

The novel SPARK® test strategy leads to faster and more stable threshold tests providing improved diagnostic abilities. Besides the standard field indices the Easyfield® delivers the evaluations of the innovative Glaucoma Staging Program (GSP)² and the classifications provided by the Glaucoma Staging System (GSS)³.

Advantages

- Fast
- Lightweight
- Performs standard automated perimetry (SAP)
- Advanced statistics and analysis software
- Compact
- Robust
- Compact
- Robust
- Performs standard automated perimetry (SAP)
- Advanced statistics and analysis software

Hardware Facelift

- Redesigned headrest with lateral eye shields allows measurements without an eye-patch, saving precious time in the preparation for the test.
- The completely new, vertically adjustable double chinrest further improves the quality of examinations by sensibly increasing the comfort of the patients.
- The stylish design of the chinrest is adapted to the ergonomically movable perimeter cone for complete versatility.
- The high resolution camera with clear video control images of the patient’s eye supports the reliability of exams.
- Standard USB interface offers the up-to-date connectivity of the OCULUS Easyfield® with any external PC. The network integration is straightforward.

1 M. González de la Rosa, J Glaucoma 2012
3 P. Brusini and S. Filacorda, J Glaucoma 2006
The new OCULUS Easyfield® was specifically designed to support glaucoma care, through preventive screening or complete visual field tests and progression analysis. However, the versatility of the device allows for all common tests of the central visual field, independent of the clinical picture.

**Enhanced test methods**

- **SPARK Precision** strategy for faster and more reliable threshold perimetry. Complete visual field test of glaucoma patients is performed in only 3 minutes per eye, the measurement excels in the stability of the results for improved progression analysis.
- **SPARK Quick** strategy for follow-up or screening examinations. For patients with perimetric history the quality of the results is similar to the ones of the SPARK Precision, with a further halving of the test duration.
- **SPARK Training** strategy for patient training and reduction of learning effects in the standard perimetry. The 40 s long exam can be successfully used also as a screening test.
- **CLIP** strategy for rapid threshold tests with an increased comfort sensation for the patients.

**Advanced analysis tools**

- **Threshold Noiseless Trend (TNT)** for precise evaluation of progression in visual field data. TNT combined with the ultrafast SPARK strategy improves significantly the sensitivity of progression detection in early glaucoma.
- **Glaucoma Staging Program (GSP)** for thorough assessment of individual visual field findings using modern algorithms of pattern recognition. Besides the unique contribution to early glaucoma diagnosis GSP can additionally substantiate the clinical evaluation of test results.
Technical data

OCULUS Easyfield® C / Easyfield® S

Static perimetry

Programs
- Pre-defined glaucoma, macula, screening and neurological tests
- User-defined tests

Strategies
- SPARK Precision, SPARK Light, OCULUS Fast Threshold, Full Threshold (4/2),
  CLIP (Continuous Light Increment Perimetry), age adapted suprathreshold screening
  (2-zone, 3-zone, quantify defects)

Test patterns
- 30-2, 24-2, 10-2, hemisphere, quadrant, single test points

Reports
- Glaucoma Staging Program (GSP), Progression report Threshold Noiseless Trend (TNT), Glaucoma Staging System 2 (GSS2)

Result display
- Grayscale, dB values (absolute/relative), symbols, probabilities, 3D plot

Specifications

Perimeter bowl radius
- r= 30 cm (11.81")

Stimulus size
- Goldmann III

Stimulus luminance range / increments
- 0-3,180 cd/m² (10,000 apostilbs) / 0.1 log steps

Background luminance
- 10 cd/m² (31.4 apostilbs)

Examination speed
- Adaptive, fast, normal, slow

Stimulus color
- White

Maximum eccentricity
- 30°

Fixation control
- CMOS camera, central threshold, Heijl-Krakau

Patient positioning
- Headrest adjustable, double chinrest, moving cone / moving cone

Device weight with accessories
- 6.8 kg (15 lbs) / 4.6 kg (10.2 lbs)

Electrical operating voltage
- All normal voltages from 100-240 V

Interface
- USB, RS232/V24, SubD

Hand control unit (optional)
- Monitor: Colour LCD display with touch-screen
  Storage: min. 40,000 examinations, data transfer to PC for backup and networking
  Printer: Integrated thermal printer

Software
- Pre-installed on hand control unit
  Backup, control, report and print software for Windows®-PC

PC requirements
- OS: Windows® XP or higher

in accordance with Medical Device Directive 2007/47/EG
